

Jamar Walker

Web Developer & Multimedia Designer

Overview

Helping someone take their vision into a state of web deployment effectively to deliver their message and amplifying the user's experience is what I aim to do. My main focus would be on User Interface (UI) design, front-end and back-end. I have an understanding of design aesthetics and the fundamentals of coding structures, such as Object Oriented Programming (OOP) practices. Working with APIs to increase the user's experience and merging great functionality with practicality is key.

Education

Full Sail University
Bachelor of Science

Year
2010
